

Presentation Review: Fast Error-bounded Lossy HPC Data Compression with SZ

Positives

I thought that the presenters did a good job of explaining the paper and stressing why this study is important for HPC. They made sure to answer as many of our questions as possible, and I thought that the activity was a simple yet effective way of getting the audience engaged.

Improvements

It seemed like there wasn't much coordination between the two presenters. It'd help if you each knew exactly which slides you'd be talking about and maybe practice the presentation ahead of time. Also, when you ask the audience a question, make sure you have some kind of answer in case no one knows instead of just moving on.
