Presentation Review: Memory Errors in Modern Systems

Positives

Good job introducing the paper and providing background. Your use of figures from the paper was really good, you explained them in a way that helped me understand them better than I did previously. Your speaking was very clear and you showed confidence while presenting.

Improvements

I think you had bad luck because it seemed like attendance was pretty low today and some people were walking in late. For that reason, discussion was a bit labored but I don't think that's your fault. I also think you could have spent some more time talking about the experiment methodology before jumping into results.
