Technical Knowledge

Please rate yourself on a scale of 0-10 in the following areas. This information will be used by the course instructors to build teams that have a broad array of knowledge and expertise...so please be honest! Putting down a 0 for a technology about which you know nothing or have no experience is not an indication of poor performance.

C programming	[7]
C++ programming	[9]
Java Programming	[5]
Web site development (HTML/CSS/Javascript)	[6]
Web application development (eg PHP/Ruby on Rails/React)	[0]
Database development (which database: __Apache Hadoop/Hive____)	[4]
Experience with Agile Project management	[8]
Other Languages (which: __Python____)	[9]

Any internships or computer related work experience?

This past summer I worked at BMW's IT Research Center in Greenville doing mostly data science work. I used databases on a regular basis, but never really developed one or built one from scratch.

I worked for Clemson Online a few semesters ago doing some basic website maintenance and improvements. I used some HTML but had to stick to a strict template.
