Presentation Review: Detection and Correction of Silent Data Corruption for Large-Scale HPC

Positives

I appreciate your professional dress. I like that your slides are well formatted and not cluttered. You were able to put a minimal amount of information on the slides and then speak about it from your own knowledge and/or generate discussion from it.

Improvements

I appreciate that you wanted to focus on answering questions from your classmates, but I think you could have spent more time talking about the details of the paper and 'teaching' us based on your expertise. I also think you could have spent more time talking about the researchers' methodologies as well as the results that they obtained. Along with that, I was hoping that you would describe the figures in the paper more because I had a hard time interpreting how they were representative of the results that the researchers found.
