Presentation Review: Message Logging

Positives
The presenter seemed confident and spoke very clearly. Questions for the audience were nicely integrated into the presentation and didn't interrupt the flow of things. The presentation followed the general flow of the paper well and explained things in order so that everyone could keep up. Also, my questions about non-determinism and active optimism were both answered quite clearly.

Improvements
One improvement I might suggest is to add some variation to the slides. Could integrate some more graphics into the slides other than just figures from the paper. Ask some more open-ended questions to generate more discussions. I thought he did a really good job overall so I can't really think of any more improvements.
