Presentation Review: Algorithm-Based Fault Tolerance for Matrix Operations

Positives
I think that you did a really good job especially considering how difficult the subject matter was. You had a really natural way of promoting discussion and asking the right questions. Your slides were well organized and clear and your explanations of the figures helped me understand the topic a little better.

Improvements
It's hard to fault you on anything considering all the technical difficulties we had today. One thing I'd say you could improve is being more clear about the questions you ask the audience. Like make sure the audience knows exactly what you are trying to ask, because there were a few times that you asked a question and it seemed like people were a bit lost. Other than that great job.
